

Defense Demo Script — Stage E & F

Payment Collection & Approval (Accounting) → Parallel Department Preparation · companion to the Defense Demo Guide

Before your turn — 60-second checklist

- You receive a contract that is **signed** (status *submitted*) from the Stage A–D presenter. Confirm the green **Client Signed** badge in its header.
- The contract's **total value should be a whole peso amount** (no centavos). Decimal totals trip a rounding quirk in the balance check when paying the exact remainder — whole numbers never do.
- Its event date should be **3+ months away** so only the 40% (not full payment) is required for approval, and no hold interferes.
- Keep two logins ready: `accounting@juancarlos.com / password123` (Stage E) and the department accounts for Stage F (`kitchen@`, `banquet@`, `logistics@`, plus one of `creative@/linen@/stockroom@`).

STAGE E — Payment Collection & Approval (login: accounting)

E1. Open from the notification

1. Log in as accounting. Open the **Notifications** panel (lower-left).
2. Point at the alert "*Signed contract ready for Accounting*" — it appeared **the instant** Sales clicked Mark Client Signed. Click it: it deep-links straight to the contract's Payments tab.

"The moment the client's signature was recorded, Accounting was notified automatically — no phone call, no paper routing. The notification takes me straight to the payment record."

Expected: Payments tab opens; peso-formatted amounts; payment plan shows the 40/60 split and the timeline dates.

E2. Explain the ₱30,000 reservation fee inside the 40%

"The collection plan starts with the ₱30,000 reservation fee — strictly non-refundable, it officially holds the event date. Importantly, it is not a separate charge: it is recorded as the first payment on the contract, and every completed payment accumulates toward the same balance. So if this contract's 40% milestone is ₱100,000, the ₱30,000 already collected at booking means only ₱70,000 remains to complete the 40%."

On screen: the payment plan card shows the reservation fee line and the 40% requirement computed from the total.

E3. Show the guardrails, then record the 40%

- 1. Click **Record Payment**. First, type an amount larger than the remaining balance → **rejected:** **"Payment cannot be higher than the remaining contract balance."**
- 2. Now record the real 40% (minus the reservation fee if it was already posted): amount, method, and the required provisional OR number. Save.

"Two controls just fired: no overpayment is ever accepted, and no payment exists without an official receipt number. Payments could not be recorded at all before the client signed."

 **Notification — instant:** the moment you save the payment, **Sales** receives "Payment posted for [contract] — current status partially paid." Click-triggered, zero delay.

E4. Narrate the collection clock (nothing to click — point at the dates on screen)

When	What the system does — automatically	Who is notified
Booking + 1 month	40% follow-up reminder ("start following up with the client")	Accounting
Booking + 2 months	40% collection task — the amount is now due	Accounting
40% due + 30 days	Aging window expires → account flagged uncollectible	Accounting
Event – 3 months	Final 60% balance reminder window opens	Accounting
Event – 2 months	60% due; if unpaid → contract automatically placed On Hold (all preparation blocked)	Accounting + Sales + Admin

"These five alerts are generated by a compliance sweep that runs at server startup and every six hours — each is sent exactly once per contract, so nobody gets spammed and nothing depends on someone remembering a date."

E5. Approve For Preparation — the gate

- 1. Click **Approve For Preparation** in the header.

"Approval is a gate with four locks: the client signature, the 40% collected, full payment if the final due date has already passed, and no inventory shortage left uncovered by a purchasing

request. All four hold, so the contract is approved — and this single click is what opens preparation for every department."

⚡ **Notification — instant, fan-out:** on this click, **Kitchen, Banquet, and Logistics** are always notified, plus **Creative / Linen / Stockroom** for each section that has items on this contract. Each department's alert deep-links to its own tab ("Open task"). This is the panel's requested "alert every department after a contract is signed/approved," shown live.

Expected: status badge flips to *approved*; the Banquet and Logistics tabs appear on the contract (they only exist after approval).

STAGE F — Parallel Department Preparation

"From this exact moment — not a day later, not after any waiting period — every department can begin preparing simultaneously. The only things that ever pause preparation again are a payment hold or, later, the 7-days-before-event material freeze that locks materials to this event."

F1. Kitchen (login: kitchen)

1. Open the Kitchen dashboard — the event is already in the queue, placed by the approval notification. Show the bell: *"Approved event ready for kitchen."*
2. Expand the preparation checklist → tick each dish → **Mark Ready** (point out it stays disabled until every item is ticked).

Expected: badge flips to "Kitchen Ready"; checklist gating enforced.

F2. Banquet (login: banquet)

1. Contract → **Banquet** tab → **Load Recommended Plan** — the system proposes staff who are free on the event date (same-day conflicts excluded automatically).
2. Adjust if you like → **Save Banquet Form** → **Print Staff Check-In Sheet** (Time In/Out columns, BISOL and AE sign-off blocks).

Expected: per-role staffing plan saved; branded printable check-in sheet opens.

F3. Logistics (login: logistics)

1. Contract → **Logistics** tab: assign the recommended truck and driver (conflict-checked for the date), save the booking.
2. **Print Trip Ticket** — fleet guideline (1 truck per 100 pax + small vehicle), loading date = day before event, the manifest with Loaded / Returned / Second Count / Variance columns, photo-evidence checkbox, four sign-offs.

Expected: booking saved with status progression; trip ticket prints on letterhead.

F4. Inventory department (login: stockroom, linen, or creative)

1. Contract → **Inventory** tab → set each assigned item to *Prepared*.
2. Point at an item's availability tile: computed **for this event date**, minus other same-day reservations.
3. Return to the contract header: the **Preparation Readiness** panel — colored chips per department and a live percentage.

"This readiness panel is the department status board the panel asked to be color-coded — green means done, and the percentage updates as each of us finishes. Notice it changed in real time while we worked in parallel."

Expected: chips turn green as F1–F4 complete; percentage climbs (e.g., 4 of 5 ready).

Handoff line to Stage G (Procurement)

"One department's item, however, is short for this date — and that shortage is exactly what triggers the procurement workflow my teammate will now demonstrate."

Notification timing cheat-sheet for your stages

Trigger	Timing	Recipient(s)
Sales clicks Send For Signature	Instant on click	Sales (record the signature)
Sales clicks Mark Client Signed	Instant on click	Accounting ("Review payment")
You click Record Payment	Instant on click	Sales ("Payment posted")
You click Approve For Preparation	Instant on click	Kitchen + Banquet + Logistics + each inventory dept with items ("Open task")
Department confirms a draft section (Stage C)	Instant on click	Sales (progress toward signature)
40% follow-up	Booking + 1 month · via sweep	Accounting
40% collection task	Booking + 2 months · via sweep	Accounting
Uncollectible flag	40% due + 30 days · via sweep	Accounting
Final balance reminder	Event – 3 months · via sweep	Accounting
Automatic On-Hold	Past event – 2 months unpaid · via sweep	Accounting + Sales + Admin

"Via sweep" = generated by the automatic compliance check that runs at server startup and every 6 hours; each time-based alert is issued once per contract per milestone. Click-triggered alerts appear in the recipient's bell immediately.

If a panelist asks you to pay the exact remaining balance on a contract with centavos in its total and it says the amount "can't be higher": that is a display-rounding edge case on decimal totals. Answer: "Totals with centavos hit a floating-point rounding guard in the entry form — our demo contracts use whole-peso totals, where exact settlement works cleanly," then continue on your whole-number contract.

CAP IT-2467 · Stage E–F companion script · timings taken directly from the implemented system (payment route, approval fan-out, and paymentCompliance sweep).
