

User Walkthrough & Business Rules Guide

The complete run-through of the system — every stage, the real buttons and tabs, the exact timing rules from the collection policy, and what changed in the latest build. Updated July 12, 2026.

Accounts and getting around

Every user logs in with a work account; the sidebar adapts to the role. Notifications and your account menu are pinned to the bottom-left corner and stay visible on every page.

Admin	<code>admin@juancarlos.com</code> / <code>admin123</code> — sees and can do everything
Departments	<code>sales@</code> (the AE), <code>accounting@</code> , <code>kitchen@</code> , <code>banquet@</code> , <code>logistics@</code> , <code>purchasing@</code> , <code>stockroom@</code> , <code>creative@</code> , <code>linen@juancarlos.com</code> — all with <code>password123</code>
Notifications	Bell in the sidebar footer with an unread count. Every milestone and hand-off in this guide sends one, deep-linked to the right tab. Pop-up toasts use the brand burgundy and dismiss themselves after 5 seconds.

01 Booking the menu tasting Sales / AE

The AE handles the inquiry and books the tasting where event detailing starts.

- Sidebar → *Menu Tastings* → **Book Tasting**. Slots run hourly **10:00 AM–5:00 PM**, one booking per slot per day, 1–10 tasting pax.
- On the list or the booking's **View Details** page: **Confirm Booking** (client confirmed attendance), **Mark No-Show** and **Record Feedback** (both unlock on the tasting day), **Cancel Booking**.

- Saving feedback (star rating, comments, items liked / to change) marks the tasting **Completed**.
- **Create Contract** converts the tasting into a pre-filled contract draft. Confirming still works after conversion — the status buttons stay available.

CHANGED — the full tasting lifecycle (confirm, no-show, feedback) is now clickable; previously bookings were stuck on "booked" forever. Booking numbers no longer collide after deletions.

02 Contract drafting and event detailing Sales / AE

Food choices, amenities, table setup, colors, venue — everything is captured on one contract.

- *Contracts* → **Create Contract** . Five form tabs: *Client Info* · *Event Details* · *Package & Menu* · *Add-ons* · *Summary*.
- Menu size is enforced per package (mains/sides/desserts/drinks): basic 3/2/1/1 · standard 4/3/2/2 · premium 5/3/2/2 · deluxe & custom 6/4/3/3.
- *Add-ons* pulls creative, linen, and stockroom items from live inventory, checked **against the event date** — quantities reserved by another same-day event are unavailable, and shortages suggest available alternatives immediately (rule 6, alternative forecasting).
- The **₱30,000 reservation fee** is the schedule hold and is **strictly non-refundable**; it counts toward the 40% collection. Payment terms allowed: the 40/60 split or 100% early payment.

03 Department validation of the draft Awaiting Department Validation

The dispatch step: each concerned department confirms its section of the draft before anything is signed.

- Creative, Linen, and Stockroom each open the contract's *Inventory* tab and confirm their own section. Kitchen sees the menu; Logistics sees venue and date.
- The status badge tells each viewer their own truth: a department that has confirmed sees **Validated** , while others still see **Awaiting Department Validation** .
- Once every section is confirmed, Sales confirms the term on the *Payments* tab (**Confirm Payment Term**) — badge moves to **Confirm Payment Term** , then **Ready For Signature** .

CHANGED — these working stages now display as statuses instead of a flat "draft", and the label is role-aware per department.

04 Signature Sales / AE

- **Send For Signature** (enabled only when every section above is confirmed; hover shows what's pending).
- Then either **Print Signature Copy** for a handwritten signing or **E-Sign PDF** → upload both signatures → **Save Signatures And Open PDF**.
- **Mark Client Signed** forwards the contract to Accounting for official recording and payment monitoring.

05 Collections — the 40/60 rules Accounting

The booking date and event date run on independent clocks. Both are enforced automatically: the system sweeps every contract at startup and every 6 hours.

- Payments are posted on the contract's *Payments* tab (**Record Payment** / **Record Payment And Provisional Receipt**) — only possible after the client has signed, never above the remaining balance.
- **Milestone 1:** 40% of the contract value is due **2 months after booking**. Collections gets a follow-up notification **1 month ahead**, and a collection-task notification at the due date.
- **Aging:** a missed 40% enters the **30-day aging window**; collections and the AE keep following up. Past the window the account is flagged **Uncollectible** with a notification.
- **Milestone 2:** the remaining 60% must be fully collected **2 months before the event**. Accounting is notified starting a month ahead of that deadline.
- **Flexibility clause:** the client may pay 100% early at any point — a fully paid contract skips every collection rule.
- **Approve For Preparation** requires: client signature, the 40% posted (reservation fee counts toward it), full payment if the final due date already passed, and no uncovered inventory shortages.

CHANGED — the follow-up, collection-task, uncollectible, and final-balance notifications are now generated automatically; each is sent exactly once per contract.

06 Department preparation All departments

Approval fans out notifications; every department works the same contract in parallel.

- **Kitchen** — *Kitchen* dashboard: tick each menu item, then **Mark Ready**.
- **Banquet (BISOL)** — contract → *Banquet* tab: staffing plan, assign staff, **Save Banquet Form**, then **Print Banquet Staffing** — the check-in sheet now carries Present, Time In, Time Out, Station, and signature columns per crew member, plus BISOL and AE sign-off blocks for closeout.
- **Logistics** — contract → *Logistics* tab: assign driver and truck, **Save Truck Booking**, then **Print Trip Ticket** — the dispatch sheet with the fleet guideline (1 truck per 100 pax + 1 small vehicle + 1 AE + 1 BISOL), the loading date (day before the event), a full equipment manifest with Loaded / Returned (BISOL count) / Warehouse 2nd Count / Variance columns, a missing-and-damaged summary, and Driver / BISOL / Warehouse / Logistics sign-offs with a photo-evidence checkbox.
- **Creative / Linen / Stockroom (Warehouse)** — *Inventory* tab: mark each item prepared. Shortage cards — and only shortage cards — show available alternatives and **Request Purchasing Or Rental**. **Print Pull-Out Summary** produces the per-section release sheet.
- **Purchasing** — dashboard queues: **Create Budget Request** with supplier quotes → accounting approves the budget (*no signature, no request, no release*) → **Submit Proof Of Purchase** → accounting confirms the expense. Every request card now has **Print Requisition Form**, producing the official Item / Purchase / Emergency Requisition Form with the item, quote, SLA lead-time note, cash-vs-30-day-PO tick boxes, and the full approval chain (Requested By → Purchasing → Accounting/Execom or Material Control Manager for emergencies → Released By → Received By).

- **Requisition forms & SLA:** Item and Purchase requisitions require the **7-day lead time** — shorter requests are flagged **Lead Time Blocked**. The Emergency requisition covers urgent cases inside the window.
- **Material freeze:** from **7 days before the event** the assigned materials are locked to it; same-day conflicts are flagged on the operations summary.

CHANGED — preparation item cards were decluttered: alternatives and purchasing buttons appear only when an item is actually short.

07 Final Balance Overdue / On Hold Automatic

An event can no longer proceed unpaid. If the 60% balance is still outstanding past its due date, the contract goes on hold — it is not cancelled and nothing is refunded.

What happens automatically: the sweep sets the contract to

Final Balance Overdue / On Hold, a red banner explains the amount and due date on the contract page, and accounting, sales, and admin are notified.

What's blocked while on hold: kitchen checklist and readiness updates, banquet staffing, truck and driver booking, and inventory preparation — every attempt returns "This contract is on hold."

Two ways out: settle the remaining balance (the hold lifts the moment full payment is recorded), or management clicks **Release Hold (Management)** on the banner — admin only, with a release note, and collections follow-up continues.

Refund policy (documented, handled outside the system): failure to pay the 60% never auto-refunds the 40%. The ₱30,000 reservation fee is non-refundable under all circumstances. Refunding any part of the 40% requires a formal cancellation letter with a valid reason, Execom review, and a cost-to-cancel computation — or the client may be offered the Food To-Go conversion instead.

CHANGED — this replaces the earlier auto-cancellation behavior, matching the corrected business rule: hold and escalate, never cancel or refund automatically.

08 Event day, returns, and closure

- After the event date passes, each inventory item card flips to a **Post-Event Check**: set *Checked OK*, or **Report Incident** (type, severity, quantity) — the incident links to the contract and exact item, mirroring the BISOL count-and-report process.
- Logistics marks its booking *Completed* when the trucks are back.
- Accounting clicks **Close Contract** — allowed only when the event has passed, the balance is 100% paid, logistics is completed, and zero post-event checks are pending.

Printed forms library

Every form prints on the company letterhead (burgundy rule, logo, document meta block) and opens the browser print dialog — choose "Save as PDF" there for a digital copy.

FORM	WHERE TO PRINT IT	WHAT IT CARRIES
Contract section prints	Contract page → Print [Section] on any tab	Details, Menu Summary, Inventory Checklist, Payment Summary, Banquet Staffing, Logistics Booking, Preferences, Timeline
Signature packet / E-Sign PDF	Contract header while pending signature	Printable signing copy or e-signed PDF with both parties
Banquet Staff Check-In Sheet	Banquet tab → Print Banquet Staffing	Per-role crew tables with Present / Time In / Time Out / Station / Signature, open slots, BISOL + AE sign-off
Dispatch & Trip Ticket New	Logistics tab → Print Trip Ticket	Fleet & crew assignment, loading date, full manifest with Loaded / Returned / 2nd Count / Variance, missing-damaged summary, 4 sign-offs + photo-evidence box
Requisition Forms New	Purchasing dashboard → Print Requisition Form on any request	Item / Purchase / Emergency variants, quote & budget, SLA lead-time note, cash vs 30-day PO, full approval-signature chain
Kitchen Checklist	Contract Menu section print	Menu items with confirmation state and ingredient status
Pull-Out Summary	Inventory tab per section	Items to release for the event with quantities and codes

Specific interpretations adopted

Where the business objectives were vague, the system commits to these concrete readings:

- **AE (Account Executive)** = the `sales` role. **BISOL / on-site supervisor** = the assigned banquet supervisor. **Execom approval** = the accounting review step on budget requests (accounting cannot release funds it has not approved). **Warehouse** = the stockroom role.
- **Standard fleet formula:** 1 truck per 100 guest pax (minimum 1) plus 1 small vehicle, 1 AE, 1 BISOL, and a driver per truck — printed on every trip ticket; a 150-pax event therefore suggests 2 trucks, matching the interview example.
- **Loading day** = event date – 1 day, printed on the trip ticket.
- **Charging for losses:** recorded on the trip ticket's missing/damaged summary ("Charged To" column) and formally via incident reports; the supervisor's counter-report is the incident resolution note.
- **"Final Balance Overdue / On Hold"** = unpaid 60% past event – 2 months. It blocks preparation, release, and execution; it never cancels the event, never refunds the 40%, and the ₱30,000 reservation fee is non-refundable in all cases.
- **Mancom review** maps to the 1-month-before-event SLA window (final details deadline + shortage visibility); the meeting itself stays a human process.
- **Utility / cleaning department** is not modeled; its event-day duties sit with the banquet setup crew role.

The collection & preparation timeline

Every constant below is enforced in code — these are the dates to shift in MongoDB when testing.

Booking day	+1 month	+2 months	+3 months	Event -3 r
₱30,000 reservation fee non-refundable, holds the date	Follow-up notification collections starts calling	40% due collection task fires	Uncollectible 30-day aging expired	Final-balar 60% remind opens
◀ ▶				

CONSTANT	VALUE	ANCHOR FIELD
Reservation fee	₱30,000, part of the 40%	–
40% follow-up alert	booking + 1 month	bookingDate
40% collection due	booking + 2 months	bookingDate
Aging → uncollectible	40% due + 30 days	bookingDate
Final 60% balance due	event – 2 months	eventDate
Final-details SLA warning	event – 1 month	eventDate
Material freeze	event – 7 days	eventDate
Requisition lead time	7 days (item & purchase forms)	neededBy
Compliance sweep	server start + every 6 hours	–
Closure unlock	after the event day ends	eventDate

What actually changed in this build

AREA	BEFORE	NOW
Tasting lifecycle	Bookings stuck on "booked"; no feedback form	Confirm Booking (list + details), Mark No-Show, Record Feedback → Completed; works even after a contract is linked
Draft statuses	Everything showed "draft"	Awaiting Department Validation → Confirm Payment Term → Ready For Signature; each department sees Validated once its own section is confirmed
Collections	Milestones computed but silent	Automatic notifications: follow-up, 40% task, uncollectible, final balance — once each, every 6 hours
Unpaid 60%	Event proceeded anyway	Contract goes On Hold: preparation blocked, banner + notifications, settle-or-management-release; no auto-refund, ₱30k always non-refundable
Preparation items	Alternatives and purchase buttons on every item	Shown only on genuine shortages
Layout & alerts	Sidebar scrolled away; small white toasts	Sidebar anchored with notifications always visible; brand-burgundy toasts, 5-second auto-dismiss
Logistics forms	Generic section print only	Dispatch & Trip Ticket: fleet guideline, loading day, manifest with BISOL / warehouse double-count and variance columns, missing-damaged summary, 4 sign-offs, photo-evidence box
Procurement forms	No printable requisition	Official Item / Purchase / Emergency Requisition Forms with quote, SLA note, cash-vs-PO tick boxes, and the full no-signature-no-release approval chain
Banquet check-in sheet	Present + arrival only, no sign-off	Time In / Time Out columns and BISOL + AE signature blocks added
Terminology & currency	"packs", \$ icons	"Guest pax" everywhere; peso icons on all payment surfaces; amounts already ₱ (en-PH)
Stockroom access	Logistics could manage stockroom items	Stockroom Inventory page and item write access limited to stockroom + admin

Business-rule alignment

Where each interview rule stands in the system today.

INTERVIEW RULE	STATUS	NOTES
1 · Booking, contract & accounting flow	Implemented	AE detailing → signature → accounting hand-off, booking vs event date kept separate
2 · 40/60 collection rules	Implemented	All milestones enforced and notified; early 100% supported
3 · Cancellation & refunds, Food To-Go	Partial	Non-refund policy enforced (no auto-refund, hold instead); cancellation letters, Execom costing, and Food To-Go conversion remain manual processes outside the system
4 · Contract dispatch to departments	Implemented	Validation + preparation notifications per department; no Utility/Cleaning module (closest: stockroom & banquet setup crew)
5 · Date-based reservation & material freeze	Implemented	Same-day stock conflicts flagged; 7-day freeze; Mancom supported by the 1-month SLA window, not a meeting module
6 · Alternative item forecasting	Implemented	Shortage cards suggest same-date-available alternatives automatically
7 · Procurement, no-signature-no-release	Implemented	Budget requests need accounting approval before funds; supplier quotes with lead times; credit-term POs not modeled
8 · Requisition forms & SLA	Implemented	Item / Purchase / Emergency forms with the 7-day rule and SLA statuses (on track / rush / blocked)
9 · Logistics & event execution	Implemented	Truck/driver assignment, trip ticket with double-count and variance columns, photo-evidence checkbox, missing/damaged charging summary, BISOL check-in sheet, post-event checks and incident reports; photo capture itself stays on paper/phone
10 · Inventory audit, variance, min/max	Partial	Minimum stock levels with low-stock flags exist; the trip ticket's second-count variance column feeds the month-end audit, but system-side variance computation and max-level auto-replenishment are not built yet

Testing tip: the timelines key off `bookingDate` and `eventDate` — shift those two fields in MongoDB to walk a contract through any milestone. Derived deadlines recompute automatically on save; the compliance sweep re-evaluates on server restart.

Juan Carlos Event Management System · Capstone build · Guide generated July 12, 2026
