

Part 5 — Scenario spotlights

My section of the demonstration: where the budget requests actually come from, and how an operational problem reaches the reports. Two scenarios shown live, then the revisions the panel has been looking at all along.

Outline §7.1 to §8.3 DK- demo kit records 2 accounts approx. 3 minutes

BEFORE YOU BEGIN

Setup, and one thing the outline does not tell you

Every record below is seeded by the demonstration kit and carries the DK- prefix. The kit was re-seeded and each screen verified against the live system for this script.

No manual preparation is needed. The kit seeds DK-PR-0002 at ₱48,000 against a Creative allocation of ₱15,000, so the over-budget block in Part 2 happens on its own. Nothing has to be lowered beforehand or restored afterwards.

If a record is missing from the screen, run `npm run seed:demokit` again. It deletes and recreates only its own DK- records and never touches anything else.

Scenario A is invisible to the Accounting account

The outline says the whole demonstration runs as Accounting. It cannot for this part. Opening DK-SAMEDAY-B as Accounting shows only **Details · Inventory · Payments**, and the same-day shortage panel does not render at all. The panel belongs to the department that owns the item — here, **Linen**.

What to do: sign in as `linen@juancarlos.com` for the two contract screens, then switch back to `accounting@juancarlos.com` for the queue and the incidents. Say it out loud rather than hiding it — it is least-privilege working correctly.

SCREEN	ACCOUNT	WHERE TO GO
A · screen 1	linen@juancarlos.com	Contracts → DK-SAMEDAY-A → Inventory
A · screen 2	linen@juancarlos.com	Contracts → DK-SAMEDAY-B → Inventory
A · screen 3	accounting@juancarlos.com	Accounting → Procurement Approval → Budget Approval Queue
B	accounting@juancarlos.com	Incidents

Verified live: the Budget Approval Queue shows **9** requests including all four DK-PR records, and the Incidents register shows **5** open reports.

Two events on one day, and an item runs short

Both events fall on **27 October 2026**. The item is **DK Seat Cover Black (same-day demo)**, code DK-LN-90, with **220 in stock**. This is the scenario that explains where the budget requests in Part 2 came from.

“Two events fall on the same date and there is not enough stock for both. This is where the budget requests you just approved actually come from.”

DK-SAMEDAY-A DK Bautista Debut — holds the stock		27 Oct 2026 · as Linen
OPEN	Contracts → DK-SAMEDAY-A → Inventory	
ON SCREEN	DK Seat Cover Black – Need 220 Available for this date 40 Reserved on same day 180 Short by 180	
SAY	“This is the first of two events on the twenty-seventh of October. It reserves two hundred twenty seat covers — the entire stock we hold.”	

DK-SAMEDAY-B DK Mendoza Wedding — runs short		27 Oct 2026 · as Linen
OPEN	Contracts → DK-SAMEDAY-B → Inventory	
ON SCREEN	Need 180 Available for this date 0 Reserved on same day 220 Short by 180 Below it: Suggested in-house alternatives with their free quantities, and a Request Purchasing Or Rental button.	
SAY	“The second event needs one hundred eighty of the same seat cover. Availability here is not a warehouse total — it is calculated for this specific date. The whole stock is already committed to the other event, so availability for this date reads zero, and the shortfall is stated on the item itself. Between the two events we need four hundred against two hundred twenty in stock. The system then proposes alternatives that are genuinely free on that date, which often resolves it without spending anything. When no alternative covers the gap, that remaining shortage becomes a procurement request — and one hundred eighty is exactly what was raised.”	
RULE	Inventory availability is calculated per event date . Quantities committed to one event on a date are unavailable to another event on that same date. Enforced by the system	

Lead with B, and be careful if you open A

DK-SAMEDAY-B is the screen that proves the point — availability reads a clean **0**, and the shortfall of 180 matches DK-PR-0003 exactly.

A also reads “Short by 180”, because availability subtracts the other event on both sides. So do *not* say “A holds it so B cannot have it” — if a panelist opens A they will see A short too. Say instead: *“four hundred needed between them against two hundred twenty in stock, and the system flags the gap on both contracts rather than silently favouring whichever was saved first.”*

Screen 3 — purchase or rental

Switch to `accounting@juancarlos.com`. Go to

`Accounting → Procurement Approval → Budget Approval Queue`. Both requests below were raised

from this same shortage.

REQUEST	ITEM	ROUTE CHOSEN
DK-PR-0003	Linen · DK Seat Cover Black · short 180	Purchase
DK-PR-0004	Stockroom · Reception Tent 10 × 20 m · short 1	Rental

“Seat covers are worth buying — they are inexpensive, they will be used again, and the company keeps them. A ten-by-twenty-metre reception tent for a single event is not; it is rented. The department that raised the shortage makes that judgement, and the system records which route was chosen.

I want to be precise about this: company practice is to look for a purchase first and turn to rental only when the item cannot be bought or is needed once — but that preference is company practice, not a rule the system enforces. The system records the choice; it does not overrule it.

What *is* enforced is what happens next. Whichever route is chosen, the request lands in this queue for the budget check before any money is released, and it must respect the seven-day requisition lead time.”

An item is damaged during the event

Stay signed in as Accounting. Go to **Incidents** in the left sidebar. The default **Open (5)** view already shows everything — no filtering or searching required.

“After an event, departments verify what came back. When something is damaged or missing, it is recorded against the contract rather than quietly written off.”

All four categories the outline mentions are represented in the register:

ITEM	TYPE	SEVERITY & STATUS
Gold Centerpiece Set	Damaged equipment	low open
Portable PA System	Missing item	high open
Champagne Satin Napkin	Burnt cloth	medium open
Mixed Vegetables	Food spoilage	medium open
Centerpiece Vase Set DK	Damaged equipment	medium open · Qty 2

Open this one Gold Centerpiece Set		Creative · damaged equipment
ON SCREEN	Contract SCN-POSTEVENT-INCIDENT · Dela Cruz Anniversary. Severity low , status open , the affected quantity, and a View Damage Photo button. Click it — the photograph is real.	
SAY	“Each entry carries the contract and the item it belongs to, the incident type, how serious it is, how many units were affected, where it stands now, and a photograph if one was taken.”	

“The record is not typed from scratch. During post-event checking, the department clicks **Report Incident** on the item instead of marking it returned, so the contract and item are already filled in — which is what makes people actually do it. The variance then carries into the missing-and-damaged summary, and unresolved losses may be charged unless the supervisor files a valid counter-report. And because the incident is attached to the contract, it appears in the department reports — management sees it without having to ask.”

Accountability rule. The variance carries into the missing-and-damaged summary. **Recorded by the system** The decision to charge a loss is **management’s**, not the system’s.

Scenarios already covered earlier

“Two of the operational scenarios were already shown earlier and I will not repeat them: the contract placed on hold by a late payment, with the notifications that precede it, was Part 4 — that is DK-HOLD-001. And a budget request rejected by Accounting, with the return-to-purchasing round trip, was Part 2 — that is DK-PR-0002.”

Revisions shown directly

No navigation needed. Narrate from this table, pointing at whatever is on screen.

PART	REVISION	WHAT THE PANEL SAW
1	Data-derived monthly budget	Amounts proposed from the trailing three-month average of confirmed spend
2	Budget check at approval	DK-PR-0002 refused — ₱48,000 against a ₱15,000 Creative allocation
2	Approval queue sorting	Newest, oldest, by event date, by date needed
3	Expanded department reports	A/R aging, collections trend, financial position, procurement register, Excel export
4	Two-decimal correction	Balances settle exactly — which is what makes closing possible at all
4	Awaiting Contract Close	DK-CLOSE-001, once post-event checks are complete
4	Ready to close notification	Accounting is told, rather than having to go looking
4	Automatic payment hold	DK-HOLD-001 — an overdue final balance blocks preparation

Revisions visible throughout

These need no navigation at all — point them out wherever they appear.

REVISION	WHAT THE PANEL SEES
Financial confidentiality	Package price and total contract value appear only for Sales, Accounting and Admin — on screen and in exported PDFs
Colour-coded statuses	Each stage is colour coded and names the department currently holding the contract
Completed-action Done tag	A notification whose task is finished is tagged green Done rather than red High
Dismissible, stacking alerts	Each notification can be dismissed; simultaneous pop-ups no longer cover one another
Notification housekeeping	Alerts for deleted contracts are removed; those of closed contracts expire automatically

Not demonstrated, but ready if raised

These belong to departments outside today’s scope. Name the manual section and offer to show it afterwards rather than leaving the running order.

AREA	WHAT IT COVERS	MANUAL
Staff transportation	Separate passenger-vehicle booking so staff never travel in a cargo truck, sized by headcount and seat capacity, driver required per vehicle	§10.4
Logistics round trip	Load manifest including kitchen items, department load readiness, driver pickup checklist, return checklist and reconciliation	§10.5–10.6
Kitchen prep windows	Sourcing alert two weeks out, preparation alert seven days out, tasting comments carried into the kitchen checklist	§8.2–8.5
Enforced business rules	Material freeze, banquet roster freeze, same-day conflict prevention, tasting-slot conflict, one waiter per 25 guests, Metro Manila number coding	Tables 9.2, 10.2, A.1, A.2

“Those belong to departments outside today’s scope, and each has a documented scenario in the manual — I can show any of them after the demonstration.”
